25X1A 25X1A	setus const instrate the see, to of	On 7 July 1965, a monitoring trip was made to to determine what improvements could be made to the prese design to improve the field curvature situation and expand the actual (usable) field of view. Was informed that the moni considered the tube magnifier to be basically unacceptable and instructed them to determine what they intended to do to recti the situation within the terms of the present contract. We wi see, on our part, what changes we can permit in the size parameter to obtain superior performance. This will, of course, require review of the present incentives with the Office of Logistics. The basic design problem is a formidable one but it is not felthat that has given us their best effort on this job.
